

Hero Core 300 Pro

SKU SHA283-300-Pro

PRICE \$695 / \$775

FEATURES

- Improves 4G signal and voice calls on Telstra, Optus, Vodafone, and most Australian mobile networks
- Designed for rural, regional, and low-coverage locations where outdoor signal is weak but available
- Supports the main Australian 4G frequency bands used by major mobile providers
- Delivers clearer voice calls and faster, more reliable 4G mobile data indoors

ABOUT

A reliable signal starts outside and Signal Hero Core is designed to bring it properly indoors. Missed calls, dropped connections, and unstable mobile data don't have to be part of everyday life in rural, regional, or low-coverage areas, even where outdoor signal is limited to just 1-2 bars.

Built as a universal solution, Signal Hero Core works with Telstra, Optus, Vodafone, and most Australian mobile networks, delivering reliable 4G data and dependable voice calls. It captures available signal from the nearest mobile tower using a dedicated outdoor antenna, transfers it through professional-grade cabling to the booster, and redistributes the strengthened signal indoors via a panel antenna.

Signal Hero Core is ideal for everyday mobile use and 4G SIM routers, helping stabilise voice calls and mobile data where indoor reception is weak despite a usable outdoor signal.

Installation is straightforward and follows a proven layout for residential, rural, and regional properties. Our technical support team is available before and after purchase.

There are no subscriptions or ongoing fees. Every unit includes a **60-day money-back guarantee and a 3-year warranty**, giving you confidence in your signal upgrade.

INSTANT SIGNAL BOOST

UP TO +72db GAIN

SUPPORTS UP TO 30 USERS CONNECTIONS

FAST NETWORK & DATA SPEED

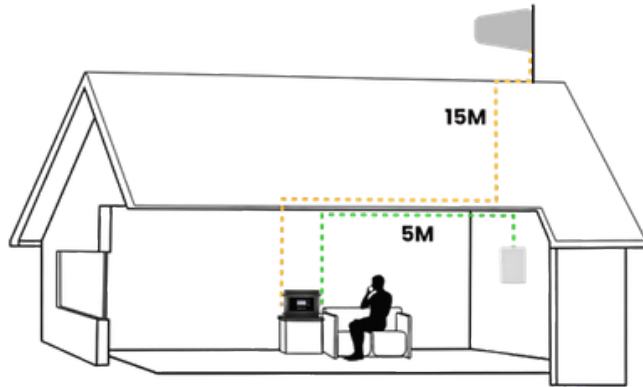

KIT INCLUDES

SPECIFICATIONS

MODEL NUMBER	SHA283-300-Pro BAND
FREQUENCIES	28 AND 3 700 MHz / 1800 MHz
MAX GAIN	72 dB ±2
IMPEDANCE	50 Ohm
POWER SUPPLY	AC 100-240V
CONNECTORS	N-FEMALE
BOOSTER DIMENSIONS	20.5 x 12.5 x 4.8 cm
BOOSTER WEIGHT	<0.6Kkg

INSTALLATION

1

The signal is received from the outdoor cell towers and transmitted through the cable to the booster box.

2

The booster box receives the signal from the outdoor aerial and retransmits it to the indoor antenna via a cable.

3

The panel antenna mounted on the wall receives the signal and retransmits a clean, high-quality phone signal throughout the property.
