

# Hero One 300

SKU SHA28-300

PRICE \$395

## FEATURES

- Boosts 4G signal for Telstra, Optus, Vodafone and most Australian mobile providers
- Ideal for rural, regional and remote areas with weak outdoor mobile coverage
- Enjoy clearer calls, faster 4G data and more reliable indoor mobile coverage

## ABOUT

Reliable mobile coverage starts with a strong outdoor signal. Signal Hero One 300 is designed to bring that signal inside your home or business. If you're dealing with dropped calls, poor reception or unreliable mobile data, this system helps deliver a stronger and more stable connection where you need it most.

Designed for locations using a single mobile network, Signal Hero One captures the strongest available outdoor signal from the nearest mobile tower using a high-gain external antenna. The signal is then amplified through the booster and distributed indoors via a panel antenna, improving voice calls and 4G mobile data throughout your property.

This solution is ideal for rural, regional and remote Australian locations, including farms, workshops, sheds, homes and small businesses where indoor coverage is poor but an outdoor signal is available. It also works exceptionally well with **4G SIM routers**, providing a more stable internet connection and improved mobile performance.

Installation is straightforward using the included components and clear instructions. If you need assistance, our experienced technical support team is available before and after your purchase to help you achieve the best possible results.

**There are no ongoing fees or subscriptions. Every Signal Hero One 300 is backed by a 60-day money-back guarantee and a 3-year warranty**, giving you confidence in your purchase.

INSTANT SIGNAL BOOST

UP TO +70db GAIN

SUPPORTS UP TO 5 USERS CONNECTIONS

FAST NETWORK & DATA SPEED

| CONNECTORS         | N-FEMALE             |
| BOOSTER DIMENSIONS | 20.6 x 12.5 x 4.8 cm |
| BOOSTER WEIGHT     | <0.6Kkg              |

## INSTALLATION

1

The signal is received from the outdoor cell towers and transmitted through the cable to the booster box.

2

The booster box receives the signal from the outdoor aerial and retransmits it to the indoor antenna via a cable.

3

The panel antenna mounted on the wall receives the signal and retransmits a clean, high-quality phone signal throughout the property.
