- Ideal for rural and remote locations where nearby mobile towers are limited
- Delivers clearer calls and more reliable 4G mobile data indoors

INSTANT SIGNAL BOOST

UP TO +72db GAIN

SUPPORTS UP TO 5 USERS CONNECTIONS

FAST NETWORK & DATA SPEED

ABOUT

Reliable mobile coverage starts at the source, and **Signal Hero One Pro** is designed to bring it inside your home. Dropped calls, weak reception and unreliable mobile data don't have to be part of daily life in rural, regional or low-coverage areas.

Designed for locations where only one mobile network provides reliable coverage, Signal Hero One captures signal from the nearest mobile tower using a high-gain outdoor antenna, carries it through professional-grade cabling to the booster, and distributes it indoors through a wall-mounted panel antenna. This makes it ideal for properties with limited tower coverage and users who rely on a single network.

Signal Hero One performs exceptionally well with 4G SIM routers, improving both mobile data and voice quality where outdoor signal exists but indoor reception is poor. Now featuring a more powerful booster, upgraded antenna and thicker low-loss cable, it delivers stronger performance, especially when outdoor signal is only 1–2 bars.

Installation is straightforward using a proven setup trusted across Australian homes, farms and rural properties. If you need assistance, our experienced technical support team is here to help before and after your purchase.

No subscriptions and no ongoing fees. Signal Hero One includes a 60-day money-back guarantee and a 3-year warranty, giving you complete confidence in your investment.

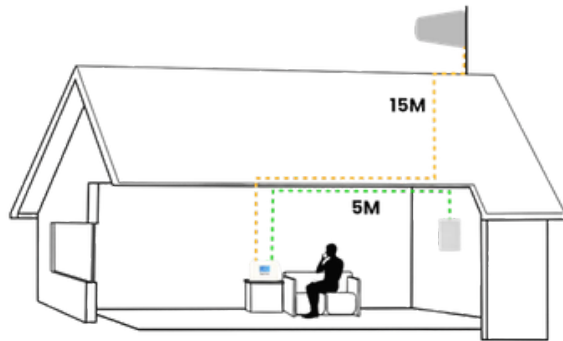

KIT INCLUDES

SPECIFICATIONS

MODEL NUMBER	SHA28-300-Pro
FREQUENCIES	BAND 28 700 MHz
MAX GAIN	72 dB ±2
IMPEDANCE	50 Ohm
POWER SUPPLY	AC 100–240V
CONNECTORS	N-FEMALE
BOOSTER DIMENSIONS	20.6 x 12.5 x 4.8 cm
BOOSTER WEIGHT	<0.6Kkg

INSTALLATION

1

The signal is received from the outdoor cell towers and transmitted through the cable to the booster box.

2

The booster box receives the signal from the outdoor aerial and retransmits it to the indoor antenna via a cable.

3

The panel antenna mounted on the wall receives the signal and retransmits a clean, high-quality phone signal throughout the property.
