

# Hero Core 600 Pro

SKU SH2A283-600-Pro

PRICE \$845

## FEATURES

- Improves 4G signal and voice calls on Telstra, Optus, Vodafone, and most Australian mobile networks
- Designed for rural, regional, and low-coverage locations where outdoor signal is weak but available
- Supports the main Australian 4G frequency bands used by major mobile providers
- Delivers clearer voice calls and faster, more reliable 4G mobile data indoors

## ABOUT

A reliable signal starts outside, and Signal Hero Core is designed to bring it properly indoors. Missed calls, dropped connections, and unstable data don't have to be part of daily life in rural, regional, or low-coverage areas, even where outdoor signal is limited to just 1–2 bars. The system is built to cover properties up to 600 sqm, making it ideal for medium to large Australian homes and buildings. As a universal solution, Signal Hero Core works with Telstra, Optus, Vodafone, and most Australian mobile networks, delivering reliable 4G data and dependable voice calls. It captures available outdoor signal from the nearest mobile tower using a dedicated antenna, transfers it through professional-grade cabling to the booster unit, and redistributes the strengthened signal indoors via a panel antenna. This setup is ideal where usable outdoor signal exists but indoor reception is weak across larger floor areas. It works effectively for everyday mobile use and 4G SIM routers, helping stabilise calls and mobile data throughout the property. Installation follows a proven layout used across residential, rural, and regional environments. Our technical support team is available before and after purchase.

**No subscriptions or ongoing fees. Includes a 60-day money-back guarantee and a 3-year warranty.**

INSTANT SIGNAL BOOST

UP TO +72db GAIN

SUPPORTS UP TO 30 USERS CONNECTIONS

| BOOSTER WEIGHT     | <0.6Kkg                             |

## INSTALLATION

1

The signal is received from the outdoor cell towers and transmitted through the cable to the booster box.

2

The booster box receives the signal from the outdoor aerial and retransmits it to the indoor antenna via a cable.

3

The panel antenna mounted on the wall receives the signal and retransmits a clean, high-quality phone signal throughout the property.
